

GeoPal wireframe

Here you'll find a rough sketch of all the UI-views the user is going to see in the final application. (Including the notifications)

Views Mockup

The Views Mockup section contains two main components. On the left is a list of four 'Location' reminders, each with the text 'What the reminder actually is and description'. A purple circle with a white plus sign is at the bottom right of this list. An arrow labeled 'opens' points from this plus sign to a larger, detailed form on the right. This form is titled 'Location' and contains the following fields: 'Enter title' (with a red box around it and a note 'Optional, maybe remove'), 'Enter description', and 'Enter location' (with a 'GPS' button next to it). A purple 'Save' button is at the bottom of the form.

Notifications Mockup

The Notifications Mockup section shows three notification cards. The first card is titled 'GeoPal' and contains the text 'The description of the task entered'. The second card has a circular icon with 'GP' and is titled 'Location', containing the text 'The description of the task entered'. The third card is titled 'GeoPal' and contains two lines of text: 'The location: The title' and 'The full description of the reminder'. At the bottom of this card is a button labeled 'Mark as complete'.
